This *Offering Document* has not been prepared in accordance with the Directive 2003/71/EC on prospectuses or any measures made under that Directive or the laws of Ireland or of any EU Member State or EEA treaty adherent state that implement that Directive or those measures. Nor has this *Offering Document* been reviewed, prior to its being issued, by any regulatory authority in Ireland or in any other EU Member State or EEA treaty adherent state and therefore, may not contain all the information required where a document is prepared pursuant to that Directive or those laws. A copy of this *Offering Document* has been delivered for registration to the Registrar of Companies (having attached thereto copies of the material contracts referred to on page 20 and any experts' letters of consent) in compliance with section 47 of the Companies Act, 1963 of Ireland.

*Investors* are advised to take independent advice from a professional advisor before making any investment. This proposal should be evaluated in conjunction with the key assumptions on pages 16 and 17 and the risks on pages 8 and 9.

The *Directors*, whose names appear on page 7, take responsibility for the information contained in this *Offering Document* and have taken all reasonable care to ensure that the facts contained herein are true and accurate in all material respects and that there are no material facts, the omission of which would make misleading any statement herein, whether of fact or opinion.

Applications to participate in *The Company* must be made on the terms of this *Offering Document* and on the application form contained herein. Applications must reach the registered office of *The Company* by no later than 5.30pm on the 29th April 2011 and the right is reserved to close the application list at any time before that date. In the event of over subscription, the over-subscribing applicants will be refunded in full.

A copy of *The Company's* Memorandum & Articles of Association along with all relevant expert letters and valuations are available for inspection at the Registered Office of *The Company*.

Investments may fall as well as rise in value. Past performance may not be a reliable guide to future performance. Before subscribing to *The Company*, *Investors* are advised to consult their Accountant, Bank Manager, Stockbroker, Solicitor, tax or other professional advisor, having regard to the nature of the investment, the risks, their own financial circumstances and their tax position.

## DEFINITIONS

Certain words and phrases used in this *Offering Document* are defined below.

- "Afforestation Grants"* means the grants payable by the *Forest Service* for the development and afforestation of bare lands.
- "Bio-energy"* any fuel that is derived from *Biomass*. Bio-energy is generally used when referring to *Biomass* energy systems that produce heat and/or electricity.
- "Bio-energy Sector"* that sector of the national economy primarily engaged in the production and processing of *Biomass* and in the production and consumption of *Bio-energy*.
- "Biomass"* recently living organisms or their metabolic by-products that can be used either as a source of energy or for their chemical components. As such, it includes trees, crops, algae and other plants, as well as agricultural and forest residues.
- "Closing Date"* means the closing date for receipt of application for *Preference Shares* is 5.30pm on the 29th April 2011.
- "Directors"* means the Directors of *The Company*.
- "Forest Management Consultant"* means a company recognised within the *Forestry* industry as being technically competent in forest management whose officers are professionally recognised by the Society of Irish Foresters.
- "Forest Premia"* means annual amounts paid by the *Forest Service* to the owner of land under afforestation, in this case, *The Company*.
- "Forest Service"* means the government department set up to administer *Forestry* in Ireland.
- "Forestry"* means Commercial Forestry and the occupation of which as defined by the Finance Act, 1969.
- "Forestry Contractor"* means an independent contractor who is experienced in the establishment and management of forest woodlands.
- "Forest Management Plan"* a plan which describes the composition of the forestry properties and includes a work plan and timber production forecast setting out when operations are to occur in order to maximise returns to *Investors*.

# THE ELEVENTH FORESTRY GROWTH PLAN PLC

<i>"Harvest(ed / ing)"</i>	means felling trees in a forest in line with the <i>Forest Management Plan</i> including the clearfelling and thinning of forests.
<i>"Inflation"</i>	means an aggregate assumed rate of inflation incorporating the Consumer Price Index, the Wholesale Price Index, Forestry and Land Demand Pull inflation and other impacting market driven indices.
<i>"Investor(s)"</i>	means a fully paid up subscriber(s) to the <i>Preference Shares</i> of <i>The Company</i> .
<i>"IFS"</i>	means I.F.S. Asset Managers Limited.
<i>"Irish Forestry Funds"</i>	means the following list of companies
The Second Irish Forestry Fund Plc	The Ninth Forestry Investment Plan Plc
The Third Irish Forestry Fund Plc	The Tenth Forestry Investment Plan Plc
The Fourth Irish Forestry Fund Plc	The Eleventh Forestry Investment Plan Plc
The Fifth Irish Forestry Fund Plc	The Twelfth Forestry Investment Plan Plc
The Sixth Irish Forestry Fund Plc	The Forestry Growth Plan Plc
The Seventh Irish Forestry Fund Plc	The Second Forestry Growth Plan Plc
The Forestry Investment Plan Plc	The Third Forestry Growth Plan Plc
The Second Forestry Investment Plan Plc	The Fourth Forestry Growth Plan Plc
The Third Forestry Investment Plan Plc	The Fifth Forestry Growth Plan Plc
The Fourth Forestry Investment Plan Plc	The Sixth Forestry Growth Plan Plc
The Fifth Forestry Investment Plan Plc	The Seventh Forestry Growth Plan Plc
The Sixth Forestry Investment Plan Plc	The Eighth Forestry Growth Plan Plc
The Seventh Forestry Investment Plan Plc	The Ninth Forestry Growth Plan Plc
The Eighth Forestry Investment Plan Plc	The Tenth Forestry Growth Plan Plc
<i>"Ordinary Shares"</i>	means Ordinary Shares of €1 each in <i>The Company</i> .
<i>"Preference Shares"</i>	means Redeemable Preference Shares of €1 each held in Registered Format at the Registered Office of <i>The Company</i> .
<i>"Offering Document"</i>	means this Offering Document dated 4th March 2011.
<i>"Semi-Mature Forestry" / "Plantation(s)"</i>	any <i>Forestry</i> that is younger than the age at which, in the opinion of the <i>Forest Management Consultant</i> , it would be commercially viable to clearfell.
<i>"The Company"</i>	means The Eleventh Forestry Growth Plan Plc.

## SUMMARY

This Summary should be read as an introduction to the *Offering Document* and any decision to invest in The Eleventh Forestry Growth Plan Plc ("*The Company*") should be based on consideration of the *Offering Document* as a whole by the *Investor*. *Investors* should familiarise themselves with the risks associated with this investment as outlined on pages 8 and 9 of the *Offering Document*.

## EXECUTIVE SUMMARY

*The Company* was incorporated on the 11th February 2011 for the principal purpose of raising €2,499,750 from retail investors in the Irish republic for investment in predominantly *Semi-Mature Irish Forestry*. Monies raised, less initial costs, will be used to purchase these lands and to cover essential maintenance and management costs until *Harvesting* income is generated. These lands will be maintained for a period of approximately twelve years, after which time the standing timber and, subsequently, the lands will be sold and distributions will then be made to the *Investors*. Under existing legislation, to the extent that these distributions derive from profits from the occupation of woodlands managed on a commercial basis, they will be exempt from Income and Corporation Tax. The *Preference Shares* will then be redeemed and *The Company* will subsequently be wound up.

*The Company* has been designed as a low risk, medium term, tax efficient investment. Returns from *Forestry* investment have historically exceeded inflation and are less volatile than international stock markets. However, *Investors* should be aware that past performance may not be a reliable guide to future performance.

The launch date for *The Company* is 21st March 2011. All applications for *Preference Shares* must be received by no later than 5.30pm on the 29th April 2011. The minimum amount required to be raised from *Investors* to enable *The Company* to proceed with its plans is €750,000. In the event that the minimum amount has not been received subscription monies will be returned to the applicants, without interest, within fourteen days after the *Closing Date*.

A copy of *The Company's* Memorandum & Articles of Association and financial models along with the Accountants' Report are available for inspection at the Registered Office of *The Company*.

## THE COMPANY

### Shareholding Details

The authorised share capital of *The Company* is €43,333 divided into 40,000 *Ordinary Shares* of €1 each and 3,333 Redeemable *Preference Shares* of €1 each.

The *Preference Shares* will be sold at €750 each to raise €2,499,750 for *The Company* and are the only shares entitled to participate in the growth of the forest investment.

40,000 *Ordinary Shares* have been issued to I.F.S. Asset Managers Limited. These *Ordinary Shares* will not rank for dividend but will carry the voting rights to ensure the necessary decisions involving the management of *The Company* can be made.

### The Directors

The *Directors* of *The Company* have considerable experience in *Forestry* investment, having already raised in excess of €66.2 million by way of share issue, from the *Irish Forestry Funds*, which make these companies, holding over 20,300 acres, one of the largest private land-owning group of companies in Ireland. Additionally the *Directors* have considerable experience in the international forestry arena through their roles as directors of the International Forestry Fund, a professional fund that has forestry operations in multiple jurisdictions.

The *Directors* will not receive remuneration from *The Company* in respect of their services as

directors. The *Directors of The Company* are also directors of I.F.S. Asset Managers Limited with whom a material contract has been entered into. The *Directors* are cognisant of the potential conflict of interest in their roles as directors of *The Company* and their roles within I.F.S. Asset Managers Limited. This has been addressed in the legal agreement between the companies and furthermore, the *Directors* have put in place a requirement that all decisions in relation to forest management must be referred to the *Forest Management Consultant*.

## Forest Management Strategy

The land and forests will be purchased by *The Company* and managed on its behalf by I.F.S. Asset Managers Limited. Forest Enterprises Limited has been appointed *Forest Management Consultant* to ensure that the woodlands will be managed by experienced professionals with a view to maximising the value of the forests.

## INVESTMENT PROPOSAL AND RETURN

Investment in *The Company* is by way of *Preference Shares*. The minimum investment is €750. Multiple shares may be purchased. Shares may be purchased by *Investors* for themselves or for others e.g. children or grandchildren or in joint names. Except as required by law, *The Company* shall not recognise shares held on trust.

*Preference Shares* are the only shares that will rank for distribution. All profits made by *The Company* will be distributed to the Preference Shareholders at the end of the investment period, in approximately twelve years time when the standing timber and lands are sold. Distributions from profits from the occupation of woodlands managed on a commercial basis under current legislation are exempt from Income and Corporation Tax. The *Directors* will not be recommending a dividend or a distribution of any surplus during the investment period. The *Preference Shares* will then be redeemed and *The Company* will subsequently be wound up.

Based on the key assumptions set out on pages 16 and 17 of this *Offering Document* the Preference Shareholders should receive a distribution of 6.5% per annum compound on their original investment in twelve years time. Assuming *Inflation* to average 2% per annum, this equates to a real rate of return (i.e. net of *Inflation*) of approximately 4.5% per annum. Whilst *The Company* has taken care to ensure that the assumptions used are reasonable, based on historical trends and current forest management practice, past performance may not be a reliable guide to future performance. Future events and circumstances may cause actual results to vary from those projected.

## TAX STATUS OF INVESTMENT

### *The Company*

Profits from the occupation of woodland managed on a commercial basis are exempt from Income and Corporation Tax. *The Company* has been designed to take advantage of these provisions. Profits arising from the sale of the underlying lands may be taxable in accordance with tax legislation in force at the time of disposal of the lands. Profits from the sale of the underlying land will constitute a small fraction of the total returns. Returns generated from other sources will be taxable.

### *Investors*

Under current legislation distributions, to the extent that they represent profits made from the occupation of woodland managed on a commercial basis, are exempt from Income and Corporation Tax. To the extent that distributions are made out of non-exempt profits they will be taxable in the hands of the *Investor* and dividend withholding tax may also apply to the taxable portion of the distribution. However, in accordance with legislation introduced by the Finance Act 2006, and as amended by subsequent Finance Acts, where an *Investor* avails of certain reliefs or exemptions from tax in any year, a restriction of such reliefs may apply if the reliefs or exemptions exceed certain thresholds and in consequence not all of any distribution made from the profits derived from the occupation of woodland managed on a commercial basis may be treated as exempt. Any amount so disallowed may be carried forward for use in the following years.

## REPORTS TO INVESTORS

Investors will receive an annual report comprising a review of the year based on the *Forest Management Consultants'* report and audited accounts.

A regularly updated web site will show the progress of *The Company*. This web site is located at [www.irish-forestry.ie](http://www.irish-forestry.ie).

## DIRECTORS, MANAGEMENT TEAM & ADVISORS

### THE DIRECTORS

#### Paul Brosnan B.Sc. MA

Paul Brosnan developed the market for the *Irish Forestry Funds* but began his career in corporate finance in Australia and commercial finance in Britain. He is Managing Director of *The Company*, and also of the *Irish Forestry Funds* and is a director of The International Forestry Fund Limited. Mr Brosnan is also a director of I.F.S. Irish Forestry Services Limited and its subsidiary, I.F.S. Asset Managers Limited.

#### Trevor McHugh BA.BS

Trevor McHugh began his career in the financial services sector and subsequently joined I.F.S. Irish Forestry Services Limited as Operations Manager, having previously worked for Ulster Bank. He is a *Director of The Company*, and also the *Irish Forestry Funds* and The International Forestry Fund Limited. He is Managing Director of I.F.S. Asset Managers Limited and I.F.S. Irish Forestry Services Limited.

The address of the *Directors* and the registered address of *The Company* is:  
Eblana House, Eblana Avenue, Dún Laoghaire, Co. Dublin.

### ADVISORS

#### I.F.S. Asset Managers Limited,

Eblana House, Eblana Avenue, Dún Laoghaire, Co. Dublin

*IFS* is a wholly owned subsidiary of I.F.S. Irish Forestry Services Limited which was established in 1997. *IFS* manages the assets of the *Irish Forestry Funds* on behalf of more than 19,000 individual shareholders. *IFS* is responsible for land acquisition and ongoing management of *The Company's* assets. The provision of administrative, financial, statutory reporting and company secretarial services are included in *IFS's* role, along with promoting *The Company's* interest within the industry and the *Forest Service*. The *Directors of The Company* are also directors of *IFS*.

#### Forest Enterprises Limited (FEL), Chapel Hill, Main Street, Lucan, Co. Dublin

Established in 1990 to give independent advice to forest owners, investors and State bodies, FEL is a *Forest Service* approved company. Forest Enterprises Limited has been retained as the independent *Forest Management Consultant* to *The Company* and will provide professional services in the form of *Semi-Mature Forestry* and land acquisition and management.

In its capacity as independent *Forest Management Consultant*, FEL has prepared and takes responsibility for the financial modelling and has reviewed all aspects of *The Company's* proposed *Forestry* activities.

Deloitte & Touche, Chartered Accountants, Earlsfort Terrace, Dublin 2, will act as auditors and tax advisors to *The Company*.

Lacy Walsh, 77 Strand Road, Sandymount, Dublin 4, will act as solicitors to *The Company*.

Ulster Bank Ireland Limited, Dún Laoghaire, Co. Dublin, will act as bankers to *The Company*.

## RISK FACTORS

### Fire Damage

Although there have been relatively few forest fires in Ireland, it still remains a significant risk. The low level of forest fire incidence is indicative of the quality of scrub clearance and forest management insisted upon by the *Forest Service*. Historically, trees have been planted to minimise the risk of fire and whilst there will be extensive insurance on *The Company's* forests, significant fire damage will result in a possible increased cost associated with the replanting of lands, a loss in expected income from tree thinning and in profits from the sale of trees or replanted trees at the end of the investment period.

### Disease

Irish forests are considered to be among the healthiest in Europe, due mainly to our island status and the rigid enforcement of strict forest plant health regulations. This, coupled with a very strong management presence, should minimise this risk. However, significant occurrences of disease will result in additional expenditure being incurred and/or the loss of profits where remedial action including the premature felling of trees is required.

### Weather

One of the reasons why the chosen tree, "Sitka spruce" grows so well in Ireland is due to our wet, mild climate. However, frost and wind damage are two potential problems. Both of these risks can be reduced by the careful selection of sites. Through knowledge and experience *The Company* will seek to minimise this risk by purchasing only the most suitable land.

### Future Market

The returns are based on selling *Semi-Mature Forestry* at the end of twelve years, for which there is a continuing strong market. This market may not be as strong when the woodlands are sold at the investment's maturity date.

### Inherent Risk

*The Company* has taken care to ensure that the assumptions and projections are reasonable based on; current industry norms, historical trends and current forest management practice. However, past performance may not be a reliable guide to future performance as future events and circumstances may cause actual results to vary from those projected. The value of investments may fall as well as rise and *Investors* may not realise the full amount of their investment.

### Tax Status

The tax situation is based on tax legislation currently in force and changes to such legislation may arise in the future. Although unlikely, such changes could be applied retrospectively.

### Grant Schemes

The *Forest Service* offer very attractive grants for *Forestry*. However, grant aid under these schemes is subject to availability of funding, meaning that grant aid may not be available when required by *The Company*. Grant rates are reviewed periodically but they may not rise in line with costs in the future. Should there be a future reduction in the grant rates available, or should there be a lack of funding made available for the grant schemes in operation, it may have a negative effect on *The Company's* performance.

### Public Liability

Industry standard public liability insurance will be taken out and maintained by *The Company* on its properties to mitigate against the cost of public liability claims. Whilst *The Company* has taken care to ensure that the level of cover is reasonable based on current forest management practice, significant levels of public liability claims will result in additional expenditure being incurred in insurance premia and claims.

### Medium Term Investment

*Investors* should be aware that investment in *The Company* should be viewed as an investment for the full investment period of approximately twelve years and while *Investors* may be able to dispose of their *Preference Shares* during this period, the price obtained may not reflect the underlying value of the *Preference Shares*.

### Liquidity

As a public limited company, shares can be traded at any time up to the maturity date of the investment. However, *Investors* should be aware that as *Preference Shares* will not be traded on the Irish or on another Stock Exchange it may be difficult for *Investors* to sell or realise their shareholding and/or obtain reliable information about their value or the extent of the risks to which *The Company* is exposed. The *Directors* give no undertaking to find a purchaser for these shares prior to maturity.

The risks listed above should not be considered as an exhaustive list of the risks which prospective *Investors* should consider before subscribing. *The Company* may be exposed to other risks of an exceptional nature from time to time.

## SECTION A FEATURES OF THE INVESTMENT

### INTRODUCTION

Ireland was once covered with forests. Following the advent of the industrial revolution and an increase in farming activity, these forests were steadily and systematically cleared during the closing centuries of the last millennium. By 1910 only 1% of the country remained under forest cover.

Today 10.6% of the country is covered with trees. Although a vast improvement, this should be considered in the context of an EU average of 42.2% (Source: eurostat Forestry Statistics - 2007 edition).

Successive Irish governments have attempted to make *Forestry* more attractive by offering *Afforestation Grants*, *Forest Premia* and tax exemption on profits from the occupation of woodland for commercial *Forestry*. By actively pursuing a policy of afforestation, land can be used productively and profitably. This policy has shown considerable success with over 224,806 hectares of private sector new forest planting between 1988 and 2008 compared to just over 8,300 hectares in the preceding twelve years (Source - Forest Service). There is now a vibrant market for *Semi-Mature Forestry* and *The Company* will take advantage of this development.

Encouragingly, Ireland has some of the best climatic conditions for growing trees in Europe, and a large market for wood and forest products close by in the UK (which imported 67% of its timber requirement in 2009 (Source: Forestry Commission - Forestry Statistics 2010)). Therefore, it makes sense for the Irish government to support a programme of afforestation and thereby reduce Ireland's dependence on imports as well as taking advantage of timber export opportunities.

### PRINCIPAL MARKETS

#### Overview

The recent international recession has led to a decrease in the demand for timber in late 2008 and 2009. However, despite the downturn, it is anticipated that international timber demand will grow, driven by emerging economies such as China and India. This is set against a static forest area globally. A combination of increasing demand and static output from forests is likely to lead to a long-term increase in timber prices. In addition to this, recent concerns over the long term supply of oil and gas coupled with energy security and climate change has led to renewed interest in timber both as a fuel and an environmentally benign building commodity. Commercial *Forestry* values are closely linked to timber prices and as timber prices increase so too will asset values.

## Timber production in Ireland

Timber production from Irish *Forestry* amounted to 2.4 million cubic metres in 2009 a decrease on 2008 and 2007 figures due to the sharp decline in Irish construction. Timber prices also showed sharp decreases during this period. However, in 2010, timber prices increased dramatically due to an export led drive by Irish sawmillers and increasing demand from *Bio-energy* facilities within Ireland. Over the next decade most of the increase in timber production will come from the privately owned forests established over the last 20 years. The main products of forests are construction timber, pallet, packaging, fencing and pulp for *Biomass* and panel board production.

## Market Drivers for timber

### Construction

The use of timber frame housing has doubled within the construction sector since 1999 from 15% to 30% in 2007. While Irish housing output has slowed significantly in recent times, timber frame housing is projected to benefit from an increased market share within the construction sector. This is due to technological advancements and ambitious government targets relating to energy efficiency. Over and above the new home construction sector, home owners have tended to move towards home improvements rather than new home purchases and this has led to increased market demand for timber used for Repair, Maintenance Et Improvement (RMI) albeit in a subdued market. The fencing market has grown strongly in Ireland over recent years. This has been due to a number of factors not least the construction boom, the national road building programme and new agricultural schemes. Fencing and pallet form the main part of Irish sawnwood exports.

Despite the decline in the Irish construction sector, the demand for Irish timber has grown over the last 2 years. Irish sawmillers, have created new markets abroad for their products particularly in the UK and France. Irish exports to the UK have increased 46% to 564,000 m<sup>3</sup>. This represents 6.16% of the UK sawn softwood timber market. Ireland is now the fourth largest exporter of timber into the UK market.

### *Bio-energy*

With government policy in Ireland emphasising the need to increase the use of renewable energy sources, the *Bio-energy Sector* has experienced strong growth. Within this sector timber has featured significantly with an estimated 476,000 cubic metres of wood used in 2006 for energy purposes. The vast majority of this is used by the industry itself to dry wood products and provide energy for its processes. Since the decline in the construction sector, the overall use of timber has reduced to 377,000 cubic metres in 2008. However, between 2007 and 2008 the use of wood *Biomass* in domestic and commercial heating increased by 41%.

Co-firing with peat will be a major market for *Biomass* from forests. Currently, peat fired generating plants produce 6% of Ireland's energy. Yet they also produce 2.8 million tonnes of CO<sub>2</sub>. It has been shown that co-firing of peat with timber can reduce CO<sub>2</sub> emissions by 30%. Edenderry Power is currently ramping up its use of wood *Biomass* as it aims towards the 30% co-firing target by 2020. During the period 2008–2009 it increased wood *Biomass* usage by 405% to 69,000 tonnes. By 2016 it intends to use 400,000 tonnes of wood *Biomass*.

The future for wood *Biomass* will come from more locally based Combined Heat and Power (CHP) plants with energy efficiencies over 80% rather than co-firing with peat where efficiencies of only 35% could be achieved.

### Government Policies

The following government policies are helping to drive timber demand in Ireland:

*Irish National Climate Change Strategy 2007 – 2012*: Recognises the importance of carbon sequestration;  
*The Energy White Paper*: A key target of 30% co-firing of wood *Biomass* with peat in three power stations;  
*Bio-Energy Action Plan*: A timeframe to achieve 15% use of *Biomass* by peat fired power stations by 2015, this report also seeks to achieve 12% of all heat to be sourced from *Biomass* by 2020;

**Energy Performance of Buildings Directive:** This European Directive is aimed at encouraging energy efficiency within buildings and was brought into Irish law in January 2006.

**Irish Housing Policy:** This document, published in 2007, envisaged 700,000 new homes built by 2020. If timber frame housing maintains or increases its market share then this will have a significant impact on demand for timber products.

The Renewed Programme for government 2009 recognises the critical role of forestry in relation to climate change and its importance to construction, *Bio-energy*, biodiversity and its potential to deliver long-term employment in other downstream industries.

## Semi-Mature Plantations

The value of *Plantations* has increased strongly over the last number of years. In the last year, demand for *Semi-Mature Plantations* has increased as has the availability of *Plantations* on the market which has led to price stabilisation. There are several contributory factors: most importantly, in the current volatile property and equity market the predictable biological growth of *Forestry* is seen as attractive to investors. Other factors are the increasing awareness of commercial *Forestry* as a fuel source mitigating the use of expensive fossil fuels and capturing carbon from the atmosphere. This increased investor interest coupled with a relatively small amount of *Forestry* coming on the market means that this trend is likely to continue into the future.

## Timber prices

Timber prices declined in late 2008 and the first three quarters of 2009. Since then prices have risen dramatically, spurred on by increased demand in the *Bio-energy Sector* and export markets especially to the UK. Foreign demand has been in response to Irish sawmillers increasing their market share abroad as a result of weak demand at home. The Irish *Bio-energy* market is growing strongly with the recent announcement of new large CHP plants and the installation of smaller plants around the country.

Results of research carried out by COFORD (who are the body responsible for the development of national forest research) suggest that demand for wood in Ireland is set to increase dramatically over the next decade to 6.5 million cubic metres per year. Most of this increase will come in the *Bio-energy Sector*, while sawn wood will remain largely static. While this is encouraging, wood supply is forecast at just 4.5 million cubic metres in the same timeframe.

*(The Principle Markets Section and data contained therein; source: Forest Enterprises Limited, 2010)*

## REVENUE SOURCES

The primary source of revenue during the investment period of *The Company* will be the sale of thinnings from *The Company's* forests along with *Forest Premia* and other related revenues. Thinning is a process that involves the *Harvesting* of a proportion of trees from a forest that allows the better performing trees room to grow and also reduces the competition for light and nutrients. All these thinnings will provide income to help finance *The Company* for the twelve year investment period and will be carried out in consultation with the *Forest Management Consultant* and in line with the *Forest Management Plan*. All profits from these sources will be reinvested in *The Company*.

## Additional Revenue Sources

Whilst acquiring, planting and maintaining land and *Forestry* is the main activity of *The Company*, the *Directors* believe that further income may be derived from other activities such as site sales for development and other suitable activities. The *Directors* will endeavour to maximise the potential of these additional revenue sources for the benefit of the Preference Shareholders. However, the potential value of these additional revenue sources has been ignored in the projections on which this *Offering Document* is based as the opportunities will be specific to individual site locations

## OPPORTUNITY

*The Company* is seeking to place 3,333 *Preference Shares*. The resulting €2,499,750 (less costs as outlined on page 17) will be used to purchase suitable *Forestry* land in Ireland with a proportion of funds being placed into a sinking fund as detailed below to provide for essential management costs. *The Company* will apply to the *Forest Service* for *Afforestation Grants* where appropriate. *Afforestation Grants* are currently assessed, approved and paid by the *Forest Service*. All land and *Forestry* will be assessed for suitability by the *Forest Management Consultant* prior to purchase.

## INVESTMENT POLICY

The investment policy will be to secure a portfolio of productive and profitable *Semi-Mature Forestry* and land suitable for afforestation. This portfolio will be managed with a view to long term growth in asset value. However, some short term tax-free income from *Forestry* thinnings will be sought. No distributions will be made during the investment period.

## PROCEEDS OF PLACING

Funds raised under this placing will be used to:

- a) Acquire *Semi-Mature Forestry* and lands for afforestation of the necessary quality for *Forestry* investment purposes. *Forestry* and lands will be purchased on normal commercial terms negotiated at arm's length.

Whilst not currently anticipated, *The Company* may purchase *Forestry* and lands from the *Irish Forestry Funds* or from other related parties. The *Directors* recognise the potential conflict of interests presented by such transactions and have put in place the following procedures with a view to managing this conflict of interests. In the event that *The Company* enters into transactions with the *Irish Forestry Funds* or other related parties for the purchase of *Forestry* and lands, each transaction will be subject to:

- (1) a certified valuation by the independent *Forest Management Consultant* utilising an industry standard methodology for calculating such forest values called Discounted Cash Flow ("DCF"); or
- (2) where this is not practical, execution on terms which the *Forest Management Consultant* is satisfied conforms with the principles set out in (1) above.

In addition the independent *Forest Management Consultant's* valuation produced under (1) or such other methodology operated under (2) will be subject to audit. Additionally, all related party transactions will be disclosed and reported on within *The Company's* annual financial statements and these will be made available to all *Preference Shareholders*.

- b) Meet the initial costs which will comprise Commission (4%), Stamp duty (projected 1% on the acquisition of *Semi-Mature Forestry* and up to 6% on unplanted land), Professional fees and Marketing costs (2% of funds raised).
- c) As *The Company* is designed to take advantage of the opportunity that exists in *Semi-Mature Plantations*, *Forest Premia* received from younger *Forestry* properties will not be sufficient to cover management and other essential costs. Therefore, a sinking fund of 6% of total monies raised less initial costs will be put in place to cover these essential management costs. The sinking fund is designed to ensure that *The Company's* *Forestry* assets are managed to the highest standards to maximise their value at the end of the investment period, and to cover audit, insurance and administrative expenses.

The minimum amount required to be raised from *Investors* to enable *The Company* to proceed with its plans is €750,000. In the event that the minimum amount has not been received subscription monies will be returned to the applicants, without interest, within fourteen days after the *Closing Date*.

## ADVANTAGES OF INVESTING IN *THE COMPANY*

Investment in *Forestry* through this *Company* has a number of advantages:

### 1. Rate of Return

Irish forests are amongst the most productive and fastest growing in Europe. The Irish government's green paper "Growing for the Future – A Strategic Plan for the Development of the Forestry Sector in Ireland, 1996 issued by the Department of Agriculture, Food & Forestry", which continues to underpin forest policy in Ireland, estimated that the real rate of return from *Forestry* (Sitka spruce) is 5% including land cost and exclusive of grants and subsidies. The real value of rural property can further increase the rate of return.

### 2. Low risk

The *Investor* gains exposure to tangible property, which will be carefully selected and managed by experts to maximise the potential of the *Forestry*. Investment in timber has historically proved to be less volatile than international stock markets. See pages 8 and 9 for a more detailed outline of the risks associated with investment.

### 3. Tangibility

Forests are tangible while their biological growth is relatively predictable. *Investors* can see their investment grow and will be encouraged to view their woodlands, the location details of which will be provided to *Investors*. *The Company* requests that when visiting these *Plantations*, *Investors* treat them with the care and consideration that growing assets deserve.

### 4. Tax reliefs

Under Section 232 of the Taxes Consolidation Act, 1997, profits from the occupation of woodland managed on a commercial basis are exempt from Income and Corporation Tax. Under Section 140 of the Taxes Consolidation Act, 1997, distributions made from such profits are also exempt from Income and Corporation Tax. *The Company* is designed to take advantage of these provisions. However, in accordance with legislation introduced by the Finance Act 2006, and subsequent Finance Acts, where an *Investor* avails of certain reliefs or exemptions from tax in any year, a restriction of such reliefs may apply if the reliefs or exemptions exceed certain thresholds and, in consequence, not all of any distribution made from the profits derived from the occupation of woodland managed on a commercial basis may be treated as exempt. Any amount so disallowed may be carried forward for use in the following years.

### 5. Economies of Scale

By investing in a portfolio of different properties, individuals can share in the substantial economies of scale associated with the acquisition, establishment and management of a block of *Forestry*. *Investors* share in a spread of expertly managed forest investments, thereby reducing risk.

### 6. Increase in Timber Demand

According to the Forestry Commission of the UK the net imports into the United Kingdom in 2008 amounted to US\$8.4 billion making the UK the world's third largest net importer of forest products. Ireland's forest owners are ideally placed to take advantage of this significant market opportunity and to better supply their own domestic market.

## THE COMPANY

*The Company* is a Public Limited Company established to take advantage of grants, *Forest Premia*, the tax favoured status of commercial *Forestry* in Ireland and the vibrant market in *Semi-Mature Forestry* that will be close to clearfell age at the end of the investment period. *The Company* allows *Investors*, at modest levels of investment, an opportunity to participate in an attractive investment where the profits will be distributed to them on a basis that will optimise the tax benefits under existing legislation. Monies received will be used to purchase suitable *Forestry* land in Ireland. Due to the competitive nature of the Irish land market, *The Company* cannot acquire or agree the purchase of land and *Forestry* until such time as the *Closing Date* has passed.

The *Directors* will endeavour to capitalise on the development potential of certain lands and existing woodlands, where appropriate, to maximise potential returns to the *Investors*.

The attraction of this investment is its simplicity and the fact that it is largely asset backed through land and *Forestry*. Monies contributed by the *Investors* will be used to purchase suitable *Forestry* land. For a once off investment of €750, based on the assumptions on pages 16 and 17 (which includes an assumption that *Inflation* will average 2% per annum over the twelve years of *The Company*), and subject to the risks outlined on pages 8 and 9, the *Investor* should receive €1,597 when the lands are sold in approximately twelve years time.

Whilst *The Company* has taken care to ensure that the assumptions used are reasonable based on historical trends and current forest management practice, past performance may not be a reliable guide to future performance. Future events and circumstances may cause actual results to vary from those projected.

*Investors* will not be asked to contribute further amounts to *The Company*. Whilst *The Company* is empowered to borrow money without limit, under the normal course of business, borrowing will be utilised only to meet the necessary overheads of managing the forests. At the date of this *Offering Document*, *The Company* has no borrowings nor has it entered or arranged borrowing facilities for the future.

Over the years, the *Forest Service Afforestation Grants* scheme has required varying levels of diverse species to be planted by landowners. Currently, a plantation must consist of 10% diverse species with a requirement that this will be broadleaf content, site permitting. However, much of the *Forestry* that *The Company* will seek to acquire will have been established under earlier rules that required 20% diverse species, while in some cases, very much older *Forestry* may have no diverse species present. In all cases the predominant species of tree that will be held within *The Company's Forestry* is called "Sitka spruce". This is the most popular tree planted in Ireland because it consistently produces high quality commercial timber in a relatively short rotation period. Among its uses are:

- ♣ Paper & Pulp
- ♣ Construction
- ♣ Posts & Fences
- ♣ MDF (Medium Density Fibreboard)
- ♣ OSB (Oriented Strand Board)
- ♣ Biomass

Ireland enjoys the presence of a number of state-of-the-art timber processing facilities. These include the Medite MDF factory in Clonmel, the Masonite factory in Leitrim and the Coillte OSB plant in Waterford. Over the past decade, significant investment has taken place in the Irish sawmilling industry. In the last number of years the Bio-energy sector has grown significantly. These plants aim to produce electricity along with wood based fuel products from locally sourced timber material. Many of them are located close to where the *The Company* will aim to purchase plantations.

*The Company* is offering prospective applicants the opportunity, through investing in *The Company*, to become part of a fast growing Irish industry with the potential for strong tax efficient returns.

## PROJECT TIMESCALE

Commercial *Forestry* in Ireland takes approximately thirty years to mature. Research indicates that this period of time is too long for some prospective *Investors* and hence the rationale behind the twelve-year Eleventh Forestry Growth Plan Plc.

After approximately twelve years the standing timber and the lands will be sold with any profits being distributed to the Preference Shareholders. *The Company* will then be wound up. The twelve year period is approximate as it will depend on the speed at which *The Company* is wound up and the assets paid for in full by the purchaser.

This progressive and innovative plan is designed to facilitate *Forestry* investment for the general public by reducing the investment period to twelve years. In comparison with the forest industry in other countries, where a very advanced market for *Semi-Mature Forestry* exists, it is the opinion of the *Directors* and the *Forest Management Consultant* that Ireland is only beginning to develop this market. *The Company* will capitalise on further developments in the *Semi-Mature Forestry* market in Ireland.

## FOREST MANAGEMENT STRATEGY

*The Company* will purchase land suitable for afforestation and productive *Semi-Mature Forestry* properties in Ireland subject to meeting criteria set down by the *Forest Management Consultant*.

The *Forest Management Consultant* will then prepare a *Forest Management Plan* which will aim to manage the forest properties with a view to long term growth in asset value and according to best forestry practice. The *Directors* believe this is necessary in order to provide for the long term financial requirements of *The Company* and to maximise returns to the *Investors*. In the normal course of purchasing *Forestry*, some remedial work may need to be carried out to maximise the asset value. This work will be covered within the *Forest Management Plan*.

The *Forest Management Consultant* will oversee the implementation of the *Forest Management Plan* which will be undertaken by fully qualified *Forestry* professionals. The *Forest Management Plan* will be reviewed periodically to assess work carried out to date, make adjustments for unforeseen events and to take advantage of new opportunities which are to the advantage of the *Investors*.

During the period of the *Forest Management Plan* most forests will be thinned to allow better performing trees room to grow. Income from these operations will be used to help finance *The Company* for the twelve year period.

## RETURNS AND KEY ASSUMPTIONS

### RETURNS

*The Company* is designed to hold the *Forestry* assets for a twelve year period. It is the experience of the *Directors* and independent *Forest Management Consultant* that the optimum value in Irish *Forestry* today is in *Semi-Mature Forestry*. Once the required timeframe has expired, all *The Company's* assets will be sold on the open market. All profits from the sale of these assets, plus any retained profits, will then be distributed to the Preference Shareholders. *The Company* will then be wound up.

Based on the Key Assumptions set out below, a once off investment of €750 per share should result

in distributions totalling €1,597 per share. To the extent that these distributions derive from profits from the sale of standing timber, they will be exempt from Income and Corporation Tax. This equates to a compound annual rate of return of 6.5% per annum.

\*This Chart is for illustrative purposes only. It merely shows the returns on various amounts invested in

### Illustrative Returns\*

Number of Shares purchased	1	5	10	20	50
Initial Investment	€750	€3,750	€7,500	€15,000	€37,500
Projected Distribution Year 12	€1,597	€7,984	€15,968	€31,936	€79,841

*The Company* based on the key assumptions stated below.

## KEY ASSUMPTIONS

The key assumptions incorporate projections, which are based on historic data, including: tree growth rates, population growth, timber demand and *Inflation* rates. Because the projections cover a period of approximately twelve years the assumptions are necessarily more subjective than would be appropriate for a forecast. Whilst *The Company* has taken care to ensure that the assumptions used are reasonable based on historical trends and current forest management practice, future events and circumstances may cause actual results to vary from those projected.

- i. Existing woodlands and lands suitable for afforestation will be purchased subject to rigid assessment and approval by the independent *Forest Management Consultant*.
- ii. The duration of *The Company* is approximately twelve years.
- iii. Initial costs will comprise Commission (4%), Stamp duty (projected at 1% on the acquisition of *Semi-Mature Forestry* and up to 6% on unplanted land), Professional fees and Marketing costs (2% of funds raised).
- iv. The following *Forestry* costs are assumed to be incurred.

	Cost	Grant Available	Grant as % of Cost
1) Forest Establishment	€3,400 per ha	€3,400 per ha	100%
2) Roads	€1,350 per ha	€1,125 per ha	80%
3) Repair	€80 per ha	None Available	0%
- v. Assumed costs under the following headings have been included in the financial model:
  - 1) Management costs as laid out in the Material Contracts
  - 2) Audit fees
  - 3) Appropriate *Forestry* insurance
  - 4) Statutory company reporting fees
  - 5) General administrative overheads
- vi. The *Forestry* will be thinned when necessary by reference to the *Forest Management Consultant*.
- vii. *Forestry* costs and timber revenues, including those for thinnings, are based on expert technical data compiled by the *Forest Management Consultant*.
- viii. The standing timber and lands are sold at open market value.
- ix. *Inflation* is assumed to average 2% per annum for the duration of the investment period (approximately twelve years) and timber prices are assumed to exceed inflation by 1% per annum.
- x. The current *Forestry* grant schemes and tax status of *Forestry* will remain unchanged or that any changes will not affect the returns.
- xi. That the sinking fund will be sufficient to cover essential management fees and other necessary overheads up to year 5. Costs beyond this timeframe will be covered from *Harvesting* income.

## EXIT MECHANISMS

### PREFERENCE SHARE DISTRIBUTION

*The Company* will be maintained for approximately twelve years, at which point much of the *Forestry* will be yielding income from timber sales and will be close to clearfell age. As such, it will be a valuable and productive *Forestry* portfolio which will yield significant timber revenues into future years for potential purchasers.

The standing timber and the lands will then be sold to the highest bidder. Distributions will then be made to the Preference Shareholders. *The Company* will then be wound up. Preference Shareholders will be given the option of first refusal to reinvest the proceeds of this investment into a new *Forestry* investment company where this option becomes available.

#### Market for Preference Shares

As a public limited company, shares can be traded at any time up to the maturity date of the investment. As *Preference Shares* will not be traded on the Irish or on another Stock Exchange, it may be difficult for *Investors* to sell or realise their shareholding and/or obtain reliable information about their value, or the extent of the risks to which *The Company* is exposed. The *Directors* give no undertaking to find a purchaser for these shares prior to maturity. Additional Stamp duty may be payable on transferred shares, the cost of which will be borne by the purchaser. Gains arising from the sale of *Preference Shares* will be taxable in accordance with Capital Gains Tax legislation.

## TAX LIABILITY

At present, under Section 232 of the Taxes Consolidation Act, 1997, profits from the occupation of woodland managed on a commercial basis, with a view to profit, are exempt from Income and Corporation Tax. Under Section 140 of the Taxes Consolidation Act, 1997, distributions, to the extent that they are made from such profits, are exempt from Income and Corporation Tax. *The Company* is designed to take advantage of these provisions.

Profits arising from the sale of the underlying lands may be taxable in accordance with tax legislation. Profits from the sale of the underlying land will constitute a small fraction of the total returns. This is due to the limited market that this land can be sold into as a result of the reforestation requirement imposed by the Forestry Act, 1946.

Returns generated from other sources, as discussed under "Additional Revenue Sources" on page 12, will be taxable. However, as these revenue sources cannot be relied upon they have been ignored for the purposes of the projections upon which this *Offering Document* is based.

## SECTION B

## GENERAL INFORMATION

### SHARE CAPITAL

The authorised share capital of *The Company* is €43,333 divided into 40,000 *Ordinary Shares* of €1 each and 3,333 *Preference Shares* of €1 each. Shares will be issued in registered form and share certificates will be issued. There will be no further issuing of shares after *The Company* closes for subscription and shares are not convertible.

#### *Preference Shares*

The *Preference Shares* will be sold at €750 each, of which €749 represents the share premium, to raise €2,499,750 for *The Company*. The minimum investment is €750 and in multiples of €750 thereafter.

The *Preference Shares* are the only shares entitled to participate in the growth of the forest investment and, as such, will be the only shares to participate in the final distribution to be made when the standing timber and lands are sold, in approximately twelve years time. The *Directors* will not be recommending a dividend or a distribution of any surplus during the investment period. *Preference Shares* will be redeemed prior to the winding up of *The Company* at the end of the investment period.

The *Preference Shareholders* do not have any right to attend or vote at any General Meeting or Annual General Meetings.

#### *Ordinary Shares*

40,000 *Ordinary Shares* of €1 each have been issued to I.F.S. Asset Managers Limited, which have been paid up as to 25c per share. These shares will not rank for dividend, but will carry the voting rights, thus controlling *The Company* to ensure that the necessary decisions involving the management of *The Company* can be made.

### LEGAL & ARBITRATION PROCEEDINGS

*The Company* is not aware of any governmental, legal or arbitration proceedings which are pending or threatened.

### CAPITALISATION & INDEBTEDNESS

*The Company* has no indebtedness as it has been established for the principal purpose of raising finance to invest directly in Irish *Forestry*. As of the date of the *Offering Document*, *The Company* has issued 40,000 *Ordinary Shares* which have been paid up as to 25c per share.

### BOARD PRACTICES

The *Directors* confirm that *The Company* complies with Ireland's corporate governance regime.

## MATERIAL CONTRACTS

Two contracts have been entered into:

- (i) I.F.S. Asset Managers Limited has been awarded the contract to maintain the forests. Mr. Paul Brosnan and Mr. Trevor McHugh are directors of I.F.S. Asset Managers Limited. I.F.S. Asset Managers Limited is a wholly owned subsidiary of I.F.S. Irish Forestry Services Limited.
- (ii) Forest Enterprises Limited has been contracted to act as the independent *Forest Management Consultant to The Company*.

## DIRECTORS' REMUNERATION

The *Directors* will not receive remuneration from *The Company* in respect of their services as *Directors* and *The Company* has no employees.

### *Directors' Interests*

The *Directors* at present are also directors of I.F.S. Asset Managers Limited. *The Company* has secured the services of I.F.S. Asset Managers Limited to maintain the forests to a level that maximises the potential of the forests, which is fundamental to maximising the returns. The consideration for this contract is presently set at €38 per acre per annum. This fee is indexed linked to the Consumer Price Index. *The Company* may also engage I.F.S. Asset Managers Limited to seek to generate additional revenues on its behalf from other commercial activity on a success basis only, where fees are charged at 10% of such additional revenues.

## REPORTS TO INVESTORS

*Investors* will receive an annual report comprising a review of the year based on the *Forest Management Consultants'* report and audited accounts.

A regularly updated web site will show the progress of *The Company*. This web site is located at [www.irish-forestry.ie](http://www.irish-forestry.ie)

***Re: The Eleventh Forestry Growth Plan plc. ("The Company")***

Dear Sirs

The Company was incorporated on 11th February 2011.

The Company has issued 40,000 Ordinary Shares of €1 each, paid up as to 25c per share. No material contracts have been entered into save those detailed on page 20 of the Offering Document.

The Company has not yet traded. No accounts have been made up for presentation to members and no dividends have been declared or paid.

We consent to the inclusion of this report in the Offering Document and take responsibility for this report.

Yours faithfully,

**Deloitte & Touche**

## SECTION C

## APPLICATION PROCEDURE

### PROCEDURE AND CONDITIONS FOR APPLICATION

To participate in *The Company* completed application forms must reach the Registered Office by the *Closing Date*. Applications will be accepted up to the maximum size of *The Company*. The right is reserved to close the applications list at any time before 29th April 2011 and to reject any application in whole or in part. *The Company* will not proceed until a minimum of €750,000 has been received by way of subscriptions. Monies will be returned to the applicants, without interest, within fourteen days after the *Closing Date* if the minimum subscription is not received.

The minimum subscription which an *Investor* may make is €750. Further subscriptions must be made in multiples of €750.

It is possible to purchase shares on behalf of others and in joint names where required. If you wish to apply for *Preference Shares* on behalf of another person, please complete the application in your own name inserting an instruction on the reverse of the Application Form signed by you, giving details of how you wish the *Preference Shares* to be allotted. Share Certificates will be issued within three weeks of the *Closing Date*.

In the event of over subscription, the over-subscribing applicants will be refunded in full, without interest, within 14 days after the *Closing Date*. Applications are accepted on a first-come-first-served basis.

Applications may be withdrawn at any time up to the *Closing Date*. Successful applicants will be sent notification within 5 working days of receipt of their application indicating the amount allotted.

Applications to participate in *The Company* will be considered only on the terms and conditions of this *Offering Document*. A completed Application Form will only be accepted with payment of subscription. If a discrepancy arises between the application form and monies tendered, the amount of monies tendered will be taken to be indicative of the number of shares for allotment.

The *Directors* may, at their absolute discretion, without assigning any reason, decline to accept an application for shares in *The Company* without liability for interest and any resulting loss or damage.

#### By completing and delivering an Application Form you:

1. confirm that you have read and understood all the information contained in the *Offering Document*, including all information available for inspection at *The Company's* Registered Office, and agree to be bound by its terms and conditions, including the Procedure and Conditions for Application.
2. warrant that, if you make an application on behalf of another person you have due authority to do so and such person shall be bound accordingly and be deemed also to have given the warranties and undertakings contained in these Conditions for Application.

#### Checklist for application:

- a) Completed Application Form. Original signed Application Form required. Faxes will not be accepted.
- b) Cheque or Bank Draft made out to: "The Eleventh Forestry Growth Plan Plc". Please ensure cheques are crossed and marked "A/C Payee, Not Negotiable".
- c) For security purposes neither cash nor Postal Orders will be accepted.
- d) Send to the Registered Office at the address below:

The Eleventh Forestry Growth Plan Plc,  
Eblana House, Eblana Avenue, Dún Laoghaire, Co. Dublin.

So as to be received by *The Company* no later than 5.30 pm on 29th April 2011.

Please use the pre-paid envelope provided.

**APPLICATION FOR MEMBERSHIP TO:**
